Ordering the City: Revolution, Modernity and Road Renaming in Shanghai, 1949–1966

Jonathan J. Howlett*

University of York

NOTE: This is the accepted manuscript version of an article that will be published in a revised form in the journal [Urban History](#), published by Cambridge University Press.

Abstract:

Between 1949 and 1966, the Chinese Communist Party (CCP)-led municipal government of Shanghai renamed more than one in seven of the city's roads. Renaming was an important marker of revolutionary change in China's largest and most foreign-influenced city. Road renaming in socialist China has been commonly understood to have been extensive. This article argues, however, that the nature and extent of renaming in socialist Shanghai was less dramatic than has been assumed. It demonstrates that renaming was not simply an iconoclastic process, but rather involved the pragmatic weighing of symbolic change against potential disruption. Further, it contends that renaming was driven by a desire to order the city, in line with the CCP's modernist worldview.

In May 1966 the Shanghai Municipal Construction Bureau received a letter from a Comrade Lu Liang. The letter drew attention to the plight of the residents of Laji Tang (Rubbish Pool) Street in Yangjiadu district, Pudong.¹ Today, Pudong, on the eastern bank of the Huangpu River, is a hyper-modern business hub, boasting a futuristic crowd of skyscrapers. In 1966, the area was a muddle of warehouses and slums. Across the river sat the grand neo-classical architecture of the skyscrapers and banks that lined the city's famous Bund, which had been constructed in the century that had followed Shanghai's opening as a treaty port in 1843. Shanghai had been at the heart of colonial activity in China. It had become the largest city in Asia: an industrial and commercial powerhouse, dwarfing all competitors with its sprawling growth, ostentatious wealth and extremes of inequality. Amongst the legions of migrants drawn

to the metropolis were the residents of Rubbish Pool Street, squatters who lived in ramshackle buildings.² Comrade Lu expressed incredulity that, seventeen years after the foundation of the People's Republic of China (PRC) in October 1949, the name Rubbish Pool Street remained unchanged, despite being an obvious legacy of the old society's contempt for the poor.³ This article joins Comrade Lu in questioning how this unfavourable name persisted for so long in socialist Shanghai. It argues for a reappraisal of the nature and extent of revolutionary transformation in urban China, through the issue of road renaming. It concludes that renaming was constrained by logistical factors and the CCP's wish to avoid disruption. In addition, renaming was motivated by another aspect of socialist ideology: a desire to order the city in the name of modernity and production.

As Marxists, the Chinese Communist Party (CCP)'s leadership believed that the character of Shanghai had been degraded by the 'semi-feudal and semi-colonial' economic and social structures that had shaped its development over the previous hundred years, as well as by the 'reactionary' rule of their predecessors, the Guomindang (Nationalist Party) government of 1927–1949. 'Liberation' (the CCP's term), in May 1949, was portrayed as an epochal transformation, marking the birth of a 'New Shanghai'. The CCP's propaganda presented the city as the site of a symbolic battle against the legacies of the exploitative old society, and as a showcase for the power of socialism to lift people from immiseration.⁴ The counternarrative to this rosy picture, promoted by overseas observers, including many who had known Shanghai before 1949, focused on the extremes of violence and disorder that characterised the Maoist period as mass mobilisation campaigns were deployed to reorder society, with devastating human costs.⁵ In the context of both characterisations, we might perhaps join Comrade Lu in wondering why a trivial matter such as changing the name of Rubbish Pool Street went unaddressed for so long.

Historical geographers have shown that 'spatial inscription' (giving names to places) is an important mechanism by which governments assert social and political control.⁶ The field of

critical toponymy has explored place renaming as an activity that creates cultural tension, as officials attempt to inscribe dominant political and cultural ideologies onto cities in moments of transformation.⁷ Revolutionaries across the globe have used toponymic renaming to reinforce temporal breaks with the past, distinguishing the ‘new’ society from the ‘old’. Inscription of new names on signs, maps and other documentation has been an universally significant way in which radical political ideology has been manifested in ordinary people’s lives.⁸ In the Soviet Union, almost half of all place names were ‘Sovietised’ after 1917.⁹ Similarly, the French revolutionaries of 1789 had changed place names in a burst of iconoclasm, rejecting Christian or monarchist forms in favour of revolutionary appellations.¹⁰ In some regards, renaming in Maoist China (1949–1976) followed similar patterns with widescale renaming taking place across the country to eliminate references to former regimes, old culture and colonial legacies, in accordance with the CCP’s socialist and nationalistic ideology. Nowhere was this process more marked than in the city of Shanghai. These renaming processes have, however, received little attention from historians.¹¹

Between 1949 and the beginning of the Great Proletarian Cultural Revolution (1966–1976), the CCP-led municipal government of Shanghai renamed around 220 of the city’s roads.¹² This amounted to more than one in seven of the approximately 1,400 roads in Shanghai in 1964.¹³ Renaming was one part of a broader process of urban transformation that reshaped Asia’s most well-known former treaty port. While recognising that renaming is an important symbolic act,

this article uses the issue of road renaming to argue for more nuanced understanding of the nature and pace of revolutionary change in socialist Shanghai. It will demonstrate that a substantial proportion of road names changed in the period 1949 to 1966 were renamed for administrative, rather than revolutionary reasons. Renaming was constrained by both ideological and logistical factors, the investigation of which exposes neglected aspects of the broader Communist project and its impacts on urban life.

In urban history, it remains common to present the Maoist era as three decades of decline and disruption, and as an interregnum, in which the city was diverted away from its natural course of prosperity and growth. One frequently cited study describes socialist Shanghai as a ‘political morass’ governed only by ‘vague doctrines’, and the CCP’s plans for urban development are said to have become ‘purely symbolic gestures of progress in a political environment that disfavoured improvement based on anything but political ideology’.¹⁴ This characterisation of urban change in Maoist China runs counter to wider trends in the field of PRC history. In recent years, a new history of the PRC has emerged that challenges historians’ traditional emphasis on high politics and disastrous political campaigns in the Mao era.¹⁵ Jeremy Brown has stressed the importance of acknowledging the unintended consequences of the CCP’s revolutionary modernisation project, especially at the grassroots where local officials adapted policy and compromised with local society when implementing instructions from the central government.¹⁶ Crucially for this study, newer scholarship emphasises the need to avoid teleology in retelling the history of the PRC, taking each development on its own terms.¹⁷ This is particularly important when it comes to understanding how the chaotic iconoclasm of the Cultural Revolution has cast a long shadow over the history of Maoist Shanghai, shaping ideas about the nature and extent of revolutionary transformation throughout the whole socialist period.¹⁸ In August 1966, Mao Zedong (1893–1976) called on young Red Guards to ‘bombard the headquarters’, unleashing their fury on so-called ‘capitalist roaders’ within the government. The wanton destruction that followed has endured in historiography and popular memory,

conditioning the way we view the Chinese revolution more widely. In regard to road names, social theorist Michel Dutton has described the CCP as ‘the past masters of renaming and remapping’, suggesting that the spatial worlds in which ordinary people lived were completely reshaped during the Cultural Revolution as Red Guards renamed roads on a massive scale throughout China, writing that: ‘one could not think of going home or going out without “going red,” for virtually every street name demanded it.’¹⁹

Before the Cultural Revolution, however, this was not the case. It is important, therefore, to understand how and when renaming occurred in socialist Shanghai, and how revolutionary change interplayed with the necessities of quotidian administration.²⁰ Political radicalism and revolutionary symbolism played important roles in road renaming, but the CCP were also driven by a desire to impose order on the urban environment. The CCP was (and remains) a high-modernist movement that prioritised order and rationality in the name of production.²¹

Communism, like all ideas, must be understood in context. As Christian Henriot has shown, overcrowded living conditions, bad sanitation and poorly regulated workplaces made life in pre-revolution Shanghai extremely deadly to those without privilege.²² The CCP’s goal was to elevate ordinary people through radical social transformation. Urban governance was always geared towards this aim.²³ Shanghai never became a workers’ utopia, but the idea of improvement was an important facet of CCP urban governance. As Lu Hanchao observes, for example, public green space in the city expanded by a factor of six in the eight years after 1949. Mao-era Shanghai was a place where there were regular and impressive flower shows, as well as mass campaigns.²⁴ In addition, Communist officials understood that all effective states must rationalise and survey the societies they govern.²⁵ For a city to be ‘legible’ to government, road

names must be widely accepted by citizens and formally recognised on maps, signs and the paperwork that (to follow Bruno Latour) reduces the complexity of the city down to easily digestible lists and statistics for administrators.²⁶

Beyond this emphasis on rationality, exploring the limits of revolutionary change through road renaming allows us to appreciate the many ways in which quotidian life in Shanghai continued to be shaped by the city's past.²⁷ Road renaming was not used to turn Shanghai 'red', instead old names were replaced with references to Chinese cities, provinces and other geographical features, including mountains and rivers. This process of writing the nation onto Shanghai's streets had obvious advantages for a government that promoted nationalism as a source of its legitimacy. It is worth noting, however, that in so doing the new authorities followed a pattern established by the administrators of the city's former International Settlement in the 1860s.²⁸

Shanghai had already witnessed widescale renaming in the 1940s, when previous governments had sought to eliminate the legacies of the imperialist past. These changes had caused great confusion. In contrast, renaming was kept to a minimum in the early 1950s, and was targeted at eliminating only the most obviously inappropriate references to the old order. Two rounds of renaming came in 1954 and 1958, as part of efforts to reshape the city in response to radical policies launched by the central government with the aim of moving China towards Communism: the General Line for the Transition to Socialism (1953–1956) and the Great Leap Forward (1958–1962). In both cases, the motive behind renaming was to systematise road names, making the cityscape more rational in the name of production. As part of this effort, politically inappropriate names were characterised as cultural impediments to production.

Renaming efforts followed a pattern whereby officials identified a need for widescale transformation, but baulked at the disruption that this might cause. This was even the case in the most radical round of road renaming in 1964, when the Socialist Education Movement (1962–1966), a campaign to promote new standards of revolutionary behaviour, reached Shanghai. Renaming in 1964 focused on 'superstitious' names with religious connotations. The

Movement laid the ideological groundwork for the Cultural Revolution, during which Red Guards took renaming into their own hands. Chaos ensued. The nation was set on a new course of ‘reform and opening up’ in 1978, following Mao’s death in 1976. Against the backdrop of some of the most rapid urban growth in human history, the local government placed renewed emphasis on making Shanghai’s road names ‘legible’ through the creation of a place name management infrastructure, as well as meticulous surveys and mapping. This emphasis on rationality echoed urban administration policies from the period 1949–1966. We will begin by exploring the longer history of road renaming in Shanghai, showing how patterns of naming were established by the city’s colonial administrators, and how the CCP’s predecessors sought to transform the city through widescale renaming.

Shanghai’s Road Names, 1843–1949

Shanghai was unique among Chinese cities in the scale of its foreign settlement areas, and the influence of European and American style architecture on its urban landscape.²⁹ Before 1949, successive administrations had used road renaming to inscribe their own identities onto the urban landscape, creating a semiotics of authority, and laying claim to the loyalties of its citizens. The first foreign settlers had arrived in Shanghai in 1843, following the signing of the Treaty of Nanking the previous year. American, British and French settlements were established on the western bank of the Huangpu, north of the walled Chinese city. In 1863, the British and American settlements merged to form an International Settlement governed by the Shanghai Municipal Council (established 1854). Thereafter, Shanghai was divided under three territorially distinct administrative regimes: the Chinese City, French Concession and the International Settlement. The Settlement’s thriving textile industry, extensive factory districts and sprawling docklands made it an economic dynamo. Chinese migrants readily embraced the relative security and economic opportunities the foreign concessions offered.³⁰

Shanghai’s distinctive geography was reflected in its road names. Road building in the Settlement began with spontaneous and unregulated private initiatives, but gradually came to

²⁹ Cole Roskam, *Improvised City: Architecture and Governance in Shanghai, 1843-1937* (Seattle, 2019).

be the preserve of the Council. In 1862, the Council decided that road names should be made intelligible to Shanghai's Chinese population, which had grown rapidly as refugees sought shelter from the Taiping Rebellion. Under this scheme, major roads running westwards from the riverfront were named after Chinese cities and north-south roads after provinces and counties. Those changed included Bridge, Church, Consulate, and Sikh Roads, which became Sichuan, Jiangxi, Beijing and Guangxi Roads respectively. However, other roads continued to be named after local landmarks (such as the Bund, Cemetery Road and Race Club Road), or prominent members of the foreign community. Gordon Road, for example, was named for General Charles Gordon (1833–1885), who commanded the Ever Victorious Army against the Taipings. In 1922, the Council ruled that road names should seldom be changed, and that it was more appropriate and convenient to use Chinese names over foreign ones.³¹

The French preferred functional names (Rue de l'Administration, Rue du Consulat), and references to local landmarks. Naming was haphazard and included a mixture of Chinese and French names until 1906, when a major reorganisation eliminated the former. In 1921, twenty-five roads were renamed after French military leaders from the 1914–1918 war (Avenue Foch, Avenue Joffre, Avenue Pétain etc.).³² The cornucopia of names in different languages across the city posed real administrative challenges.³³ Some roads acquired alternative names among different language communities: Nanjing Road, the Settlement's most famous shopping street, was known by Chinese residents as the *Da malu* or 'main road'.³⁴

In 1927, the Chinese-administered regions of Shanghai came under the rule of the National Government (1927–1949), a dictatorship dominated by the Guomindang and its leader Jiang Jieshi (1887–1975, aka Chiang Kai-shek). The National Government's urban policy was designed to show the world that China could govern modern cities. In July 1929 development began of a new administrative centre in Jiangwan, to the northeast of the concessions, which was intended as a grand showcase for Chinese municipal governance.³⁵ More than 130 new roads were laid out as part of this 'Greater Shanghai Plan', with several major new

thoroughfares linking the development to the city centre, each of which was named after a founding father of the Guomindang. This included: Sun Zhongshan (1866–1925, aka Sun Yat-sen), the party's founder and first president of the Republic of China; Huang Xing (1874–1916), the early Republic's commander-in-chief; and Chen Qimei (1878–1916), a martyred co-founder.³⁶ Other new roads were named after aspects of Guomindang ideology, typically featuring one or more of the three characters *Guo* (nation), *Min* (the people) and *Zheng* (government): *Guo* signified the government and party; *Min* referred to Sun Zhongshan's 'Three People's Principles' that formed the core of Guomindang ideology ('*Minzu*' (nationalism), '*Minquan*' (democracy) and '*Minsheng*' (the people's livelihood)); and *Zheng* was synonymous with the National Government.³⁷ The project was interrupted by Japanese invasions in 1932 and 1937, the latter of which ended in eight years of occupation.

Japanese troops seized the foreign concessions in December 1941. In 1943, the Vichy government of occupied France abrogated its territorial claims in China in a gesture of solidarity with the Reorganized National Government of the Republic of China (1940–1945), a puppet government installed by the Japanese, led by Wang Jingwei. The Americans and British followed suit, ceding nominal control of the International Settlement to their exiled allies, the Guomindang. In October that year, Wang's government renamed 240 roads in the former concessions that were deemed to be imperialistic or unpatriotic in meaning. Replacement names referred mainly to Chinese provinces, cities, mountains or rivers, following the established pattern of naming in the Settlement. Homophones, or near homophones, were preferred. For example, Hart Road, known as Hede Road in Chinese, became Changde Road, after the city in Hunan province.³⁸ Gordon Road was renamed Jiangning Road, after a county in Jiangsu province.

Following Japan's defeat, the Guomindang government moved quickly to rename more than 80 roads in November–December 1945. Many roads that had been renamed under the Japanese reverted to their former titles. Others, especially in the former concessions, were newly rechristened after Guomindang heroes. The Bund became Zhongshan Dong Yi (Zhongshan East First) Road, after Sun Zhongshan. Avenue Joffre became Lin Sen Road after the chairman

³⁶ *SDZ, Dashiji* [Chronicle of Events]. Beyond naming new roads, the Guomindang did not attempt widescale renaming in the two major Chinese-controlled areas, Nanshi and Zhabei.

³⁸ Huang, 'Politics of street names', 150; *SDZ*, Chapter 7, Section 2.

of the National Government from 1931–1943 (Lin Sen, 1868–1943). Amidst these changes, planners also sought to simplify road naming. Where possible, adjoining roads were merged into one longer stretch, divided into named sections indicating directions (north, south, east, west, or central), reducing the number of names and facilitating navigation.³⁹ The former Avenue Foch and the adjoining Avenue Edouard VII, for example, were amalgamated and renamed Zhongzheng Road, using the courtesy name of Jiang Jieshi.⁴⁰

Before ‘Liberation’ in May 1949, therefore, Shanghai had already witnessed two major rounds of renaming. This had accomplished the puppet and Guomindang governments’ shared goal of eliminating the majority of foreign road names, but had also caused great confusion. Names used in official contexts jarred with those deployed by people in everyday life. Well into the 1940s, for example, the four main parallel east-west roads to the south of the ‘*Da malu*’, were referred to by locals by numbers, beginning with the *Er malu* (‘second road’), which was formally called Jiujiang Road, and ending with the *Si Malu* (‘fourth road’), officially named Fuzhou Road. Commercial publishers produced long lists of names to help people navigate the changing metropolis.⁴¹ After 1949, the CCP struck a more cautious balance between spatial inscription and the quotidian demands of municipal administration.

After ‘Liberation’, 1949–1953

By the time that the CCP arrived in Shanghai, the party had developed a well-defined urban strategy centred on maintaining social and economic stability to prevent disorder.⁴² From the late 1920s, the Communists had pursued agrarian revolution. This changed when, following a series of military victories, Mao Zedong announced in March 1949 that the ‘centre of gravity of the Party’s work has shifted from the village to the city’.⁴³ Traditional accounts of the takeover portray the CCP as rustics, suspicious of the cosmopolitan cities and fearful of the challenges of urban governance.⁴⁴ On the contrary, CCP leaders embraced cities as centres of industrial production and the home of the revolutionary proletariat. By harnessing cities’

resources, the logic went, the CCP could defeat foreign imperialists and domestic reactionaries, and could create the material conditions needed for society to advance towards communism. The party prioritised transforming ‘consumerist’ cities into centres of production that ‘served the people’.⁴⁵ In 1949, Shanghai was a city wracked by war and hyperinflation. The CCP leadership’s instructions on urban management emphasised securing short-term stability above all else.⁴⁶ The new government placed great emphasis on information gathering as a prerequisite for action, carrying out mass surveys of every aspect of Shanghai’s political, economic and cultural life before seizing the city in 1949, followed by a forensic neighbourhood-by-neighbourhood census in 1951.⁴⁷ Policies and procedures adopted during the military takeover endured into the early 1950s.

The goal of socialism was to improve lives and the CCP’s urban management was geared towards this end. The Communists presented old Shanghai as an evil place, a place of ‘foul wind and bloody rain, a place of darkness’ to quote one children’s book.⁴⁸ This was a caricature, but there was some truth to the idea that the city was an unjust and uncaring place. Between 1915 and 1951, around one million exposed corpses and abandoned coffins were recovered by charitable organisations from the city’s streets.⁴⁹ In contrast, ‘New Shanghai’ was celebrated in three registers in the CCP’s socialist realist propaganda: as a departure from the exploitative past; as an already existing model of good governance, in which citizens could lead productive and healthy lives; and as a promised utopia.⁵⁰

In practical terms, a small number of iconic Shanghai sites were repurposed with great fanfare, including the site of the former Shanghai Racecourse which became to People’s Square in 1952.⁵¹ The first prestige project was completed in 1955: the towering Sino-Soviet Friendship

Building, a gift to the city from the USSR.⁵² Beyond this, state resources were mostly invested in the construction of industrial districts and worker housing. In this vein, in 1951 Caoyang New Village was opened as a showcase for the benefits of the new society.⁵³ Model worker housing served a dual purpose as a solution to Shanghai's overcrowding, and as a representation of the government's concern for the workers. The most famous housing project was the transformation of the Fangua Lane slum to a modern development in 1964.⁵⁴ Beyond these high-profile projects, inequality persisted, and the broader pattern of urban transformation was one of moderate, rather than fundamental, change.

Renaming was guided by instructions from the party centre. Mao had instructed those in leading positions to 'guard against arrogance' in March 1949, forbidding the naming of places, streets or enterprises after party leaders.⁵⁵ This injunction endures to the present day. In December 1951, the State Council declared that only three types of road names should be changed, to prevent economic and social disruption: those named for domestic or foreign 'reactionaries'; those that 'discriminated against ethnic minorities'; and those that were confusing (including duplicates). All significant changes were to be discussed at local People's Consultative Conferences and referred to the Ministry of the Interior for approval.⁵⁶ The State Council ordered that renamed streets were to be called after China's provinces, cities and autonomous regions.⁵⁷

The guiding principle was to 'uphold custom and elevate the nation'.⁵⁸ Most Chinese cities have a few prominent thoroughfares with revolutionary names, including Jiefang (Liberation) Road, and Renmin (People's) Road, but because the State Council's instructions were followed nation-wide, China's cities exhibit a relatively uniform pattern of naming based on Chinese geography and local landmarks. This echoed the naming and renaming practices developed in Shanghai during the colonial period. Yao Xiaoyi and Cai Junmei have suggested that the adoption of this pattern elsewhere in China was due to Shanghai's outsized influence.⁵⁹ Although there is no direct evidence that the State Council's decision to use geographical

names was based on the Shanghai model, it is not unreasonable to infer that this may have been the case. This spatial inscription was not ideologically neutral: writing the nation onto local maps, promoted national consciousness over local distinctiveness.⁶⁰

The State Council's instructions ensured that there was no widescale renaming in early 1950s Shanghai. Responsibility for road naming was held by the Municipal Construction Bureau, with oversight from the higher echelons of the city government.⁶¹ In March 1950, Mayor Chen Yi wrote to the State Council asking permission to change the names of some roads and parks in the city named after Guomindang leaders, noting that nothing had yet been done in this regard.⁶² Permission was granted and the decision was announced in May.⁶³ A total of 16 roads were renamed, 13 of which were named after Guomindang figures.⁶⁴ The CCP chose to rename these roads after important places in the party's history, projecting their revolutionary mythology on to Shanghai's cityscape while sticking to the State Council's instructions to use geographical names: Zhongzheng Road became Yan'an Road, named after the CCP's remote wartime headquarters; Qimei Road became Siping Road, after the location of a series of crucial battles in Northeast China that turned the course of the Chinese Civil War; and Lin Sen Road became Huaihai Road after the decisive military campaign that secured the CCP's victory.⁶⁵ The State Council had ruled that streets named after politically acceptable individuals need not be changed, so the names of the three roads named after Sun Zhongshan endured because the Communists also claimed him as the father of their revolution. Similarly, the name of Huang Xing Road was not changed until 1964. Nine other roads were renamed later that year, but only one for political reasons: a branch of Qimei Road that had been missed previously.⁶⁶

Beyond politics, the expense of road renaming may also have discouraged the practice. New signs would have to be made and installed, with the old ones disposed of. This was a costly

⁶⁰ Huang, 'Politics of Street Names', 156. more than 170 roads were built in Shanghai between 1951 and 1958. Each district adopted a geographical region of China from which names were drawn, roughly analogous with its location in the city: north-eastern Yangpu district adopted place names from China's north-eastern Dongbei region, for example, and Pudong district, in the east, drew on names from Shandong province in eastern China.

business. There were indirect costs too, including updating information held by government departments, maps and lists, and in informing people of the changes. Local businesses and residents would incur costs, including updating shop signs, stationary and advertisements.

Caution defined road renaming in Shanghai until 1954. Only seven roads were renamed in 1951, five for administrative reasons, including to eliminate homophones. Two changes in 1951 were politically inspired: Minguo (Republic) Road (formerly the Boulevard Republique des Doux), which was renamed Renmin (People's) Road; and Dugao Road, so named because it was home to the ancestral temple of the notorious Green Gang leader Du Yuesheng. The latter was changed to a near-homophone. Only two names were changed in 1952, one of which was left over from the colonial period Keming (formerly 'Cunningham') Road. Eight changes were made in 1953, with the majority being for routine administrative reasons.⁶⁷

Some renaming in the early 1950s was representative of changing political realities. For example, in January 1954 Bi Jiao Road, the site of a large prison, was renamed. Its name derived from the proverb '*ming xing bi jiao*' meaning 'deploy criminal punishment to educate people to obey the law'. The new name was Xi Qin (Study Industriousness) Road, in reference to the CCP's emphasis on 'reforming' offenders through labour and political study.⁶⁸ Aside from the names of a few important thoroughfares, however, very little had changed in terms of road names between 1949 and 1953. Of a list of 415 former International Settlement and French Concession roads compiled by the CIA in June 1953, the names of only thirteen had been changed from those used under the Guomindang.⁶⁹ Most renamed roads were in located in the city centre. As Pan Tianshu and Liu Zhijun have noted, renaming had little bearing on the city's 'lower orders' who lived in industrial or squatter districts far from the city centre.⁷⁰

The Shanghai City Master Plan, 1954

The first bout of widescale renaming of roads in socialist Shanghai came in 1954, in response to national developments. In 1953, the country embarked on a 'transition to socialism' under

⁶⁷ SDZ, Appendix 2, *qingkuang baogao*, 2 May 1964. Cunningham Road was named for an American diplomat.

the First Five Year Plan. A radical vision for the city's socialist future was drawn up to mark this major shift in state-society relations. On 25 March 1954 the Municipal Construction Committee published its first coordinated plan for urban development, the Shanghai City Master Plan, which established city-wide priorities for building and redevelopment.⁷¹ It offered an ambitious vision for a socialist city that prioritised production and improved living standards.⁷² The single largest renaming of Shanghai's roads to date followed, in December 1954, with 58 names changed.⁷³ Some were obviously selected due to their names being considered inappropriate, but more prosaic reasons informed the majority of choices.

Aside from replacing names that were duplicates, homophones, easily confused, or too long, there were four main administrative rationales for changing names. The first was that a large number did not follow the pattern of east-west roads being named after cities and north-south roads being named after provinces. For instance, Wenchang Road, which ran north to south, was named after a city. It was renamed Wen'an Road, after a county. The second reason was that some roads used anachronistic place names: Fengtian Road bore the old name for Liaoning province, for example; and Kulun Road bore the old name for Ulan Bator, the capital of Mongolia, which had secured independence from China in 1921. The latter was not only an anachronism therefore, but also anomalous as a street named after a foreign capital. Remarkably, Lundun (London) Road, had also survived waves of Nationalist and Communist renaming.⁷⁴ The third administrative reason for changing road names was that some had suffixes that did not reflect their relative size or importance. Fourth, many roads were named after landmarks that were either no longer present, or considered anachronistic.⁷⁵ A very few other roads were renamed for political reasons, including a small number with obvious links to the Guomindang. This included Minsheng (People's Livelihood) Road, the name of which alluded to one of Sun's Three People's Principles.⁷⁶ Renaming was often imperfectly executed. In 1959, for example, the editors of *Jiefang Ribao* received a letter from a local asking why there was still

⁷³ *SDZ, Dashiji*. Six roads had also been renamed earlier in the year.

⁷⁴ *SDZ, Dashiji*.

⁷⁵ This included, for example, Zhangchuan Road, which was named for a gate in the wall of the old Chinese city that no longer stood.

⁷⁶ Minsheng Road was renamed Minhe Road, after a county in Qinghai. *SDZ*, Appendix 2, *Shanghai Shi Chengshi Jiansheju shangbao Shirenwei guanyu genju Wang Suici deng jianyi bu yao suibian genggai diming an jinxing diaocha chuli de qingkuang baogao*, 2 May 1964.

a Lundun (London) in Shanghai when the imperialists had long been chased out. In their reply, the Bureau pointed out that this road had already been renamed in December 1954, but the old road sign had not been taken down.⁷⁷

Of course, renaming could often be both politically desirable and administratively necessary. One of the eight roads renamed in 1955 was Shi Zhengfu (Municipal Government) Road, in Xuhui district. It had acquired this name because it was home to the Guomindang's government administration between 1927 and 1933. The existence of the name was potentially confusing as the current government's headquarters was located elsewhere.⁷⁸

Road renaming in the mid-1950s was targeted at removing only the most egregious references to the old society, alongside a need to systematise naming. One of the four roads renamed in 1956 was Ma Yushan Road, named after a businessman who had developed the road as part of his horse racing and stabling business. The area's district committee recommended to the Construction Bureau that the road be renamed because they 'believe[d] that on liberated ground this type of person's name should not be preserved as a road name'. The decision was rationalised by pointing out that the road could be amalgamated at both ends into existing roads, making naming in the area more logical.⁷⁹ This suggestion was approved because it suited the local government's twin aims of eliminating 'semi-feudal' legacies and systematising naming.

The Late 1950s

Urban planning assumed a new importance in late 1950s Shanghai. In April 1956, Mao Zedong delivered a major speech titled 'On the Ten Major Relationships' which signalled a shift towards fast-paced socialist transformation. Mao placed new emphasis on harnessing the economic power of China's coastal cities and local officials scrambled to respond.⁸⁰ Shanghai officials produced an ambitious new plan for urban development, which was approved in 1958. That year, Mao commanded that China should undertake a 'Great Leap Forward', rapidly developing agriculture and industry. To support the Leap, an even more radical urban plan was

⁷⁷ SMA B257-1-938, *Shanghai Shi Renmin Wei Bangongting yu Jiefang Ribao deng danwei guanyu chaozhuan jianyi yu genggai luming de renmin laixin*, Mar. to Nov. 1959.

⁷⁸ *SDZ, Dashiji*. The seven other changes made that year were minor administrative changes, including correcting an erroneously written character in one name.

adopted. Under the new plan, the ‘Leap’ in production was to be linked to improvements in all areas of urban life, including constructing satellite towns, clearing slums, relocating industrial districts, increasing green space, and constructing roads. Planners considered the city’s roads too narrow and winding, so a network of widened arterial avenues was laid out. Highways were built to connect to the surrounding satellite towns and other regional cities.⁸¹

Even during the radical year of 1958, however, road renaming in Shanghai was limited. The Construction Bureau received a slew of letters from newspaper readers on the subject of renaming roads to remove cultural impediments to production, forwarded by the editorial offices of newspapers *Jiefang Ribao* and *Wenhui Bao*.⁸² Letters to editors were an approved means of expressing a degree of criticism of government organisations, and an avenue through which citizens could demonstrate their own revolutionary credentials.⁸³ In response, the Bureau identified 39 roads in need of immediate renaming. Of the 39, only ten were deemed ‘inappropriate for the socialist system’ because they had associations with the Guomindang, including those with the characters *Guo*, *Min*, or *Zheng*. The rest were to be renamed because of the need to systemise and rationalise in the name of production.⁸⁴

Eventually, only fifteen of these roads were renamed in 1958. Ten roads renamed in December that year were located in the area designed to be the Guomindang’s administrative centre. These included two named for aspects of Guomindang political philosophy: Sanmin Road, the name of which alluded to the Three People’s Principles; and Wuquan Road referring to Sun’s concept of the ‘Separation of Five Powers’. The other eight names indicated a geographical position relative to the Guomindang’s government administration compound. Ultimately, the pattern of road renaming in 1958, was similar to that of 1957 (nine roads) and 1959 (four).⁸⁵

⁸⁵ SDZ, *Dashiji*, Appendix 2, *qingkuang baogao*, 2 May 1964.

The radicalism that accompanied the launch of the Socialist Education Movement in 1964 saw a new wave of calls for changing ‘leftover feudal, superstitious and colonial names’. The Bureau conducted another survey in May 1964 and identified 213 problematic road names.⁸⁶ The fact that so many were considered inappropriate at this time speaks to how little had been done previously.⁸⁷ The Bureau’s selection included: roads with ‘the obvious colour of feudalism and superstition’; roads with inappropriate peoples’ names, like Huang Xing Road; those with problematic references to the old culture, and roads named after colonial landmarks, including; Tiyyuhui (Sports Club) Road, which was named after the former British club; Tianzhu Tang (Catholic Church) Street; and Yihe Road, named after the British trading firm Jardine, Matheson & Co. The central government had warned again in February 1964 against renaming roads without good grounds. With reference to the State Council’s 1951 injunction, it was decided that only 61 very inappropriate names would be changed. Amongst these, 40 were considered problematic because they had religious connotations, chiefly referring to Buddhist, Christian, Daoist, and Muslim places of worship. Names continued to be changed as little as necessary to remove the offending aspect, with geographical names preferred. Sanguantang Road, named for its Daoist temple, for example, was renamed Sanmenxia Road after a city in Henan province. The 21 other names that were changed had capitalist, ‘reactionary’ or colonial connotations, including Diandang (Pawnshop) Street, and Yingui Road, named for ‘local strong man’ Wang Yingui. Huang Xing Road was renamed Ningguo Road (after a city in Anhui).⁸⁸

Although the ideological climate of 1964 was more radical, the Construction Bureau again stopped short of road names identified as problematic. Policy was by no means to change anything that offended revolutionary sensibilities, even when called upon to do so by ‘the masses’. For example, a resident had written to complain about the derogative names of Sha Zhu (Pig Slaughter) Lane and Gou Rou (Dog Meat) Lane in April 1963.⁸⁹ Similar complaints

The letter writer complained that the old names had endured because homophones had been used.

were received about the name of Rubbish Pool Street in May 1963 and September 1964.⁹⁰ The Bureau refused these requests, explaining that because ‘some road names are shaped down through history, and the names are already very familiar to the local residents’.⁹¹ This was in line with the State Council’s instructions against unnecessary renaming. It was not until after Lu Liang’s May 1966 letter that Rubbish Pool Street’s name was finally changed (becoming Fukang North Road).⁹² Lu had deployed the language of the Patriotic Hygiene Campaign, suggesting that the name implied that the street was an unsanitary place.⁹³

The Cultural Revolution and After

On 8 August 1966 the Central Committee passed a ‘Decision Concerning the Great Proletarian Cultural Revolution’, calling for the masses to organise themselves to overthrow those in power ‘taking the capitalist road’, and to transform all aspects of culture that were ‘not in correspondence with the socialist economic base, so as to facilitate the consolidation and development of the socialist system.’⁹⁴ In Shanghai, Red Guards took to the streets determined to ‘destroy the four olds’ (customs, culture, habits, and ideas). This escalated from accosting people in the streets due to their dress or hairstyle, to widespread murder, assault, arbitrary detention, and the ransacking of private homes.

The Cultural Revolution gave radicals the opportunity to act out against perceived conservatism in all fields of governance, including urban administration.⁹⁵ Bureaucrats’ inability to properly address the issue of road naming was understood as an example of conservatism in action. Red Guards took renaming upon themselves. In Huangpu district, the

⁹⁰ SMA B257-1-3440-144, *Xinmin Wanbao baozhuan Mao Jingding guan yu jianyi Pudong Yangjiadu Laji Tang Jie genggai Fukang Bei Lu qing Jianzhu Guanli Chu yanjiu chuli de han*, 31 May 1963; SMA B257-1-3834-247, *Shanghai shi chengshi jianshe ju chuli Yang Ting jianyi genggai Laji Tang Jie luming laixin de wenjian*, 11 Sep. 1964.

city's commercial heartland, Red Guards tore down 93 per cent of shop signboards (2,166 of 2,328), and renamed restaurants, schools, and hospitals. Red Guards took Nanjing Road as their revolutionary headquarters, laying claim to Shanghai's most famous commercial boulevard by renaming it Fandi (Anti-imperialism) Street.⁹⁶

Across China, signs bearing old road names were vandalised.⁹⁷ Renaming was a creative act, but it was performed within a political context that demanded orthodoxy. Elizabeth Perry and Li Xun have argued that the Cultural Revolution witnessed the creation of a new revolutionary language, characterised by a tendency to reduce everything to 'red' (good) or 'black' (bad). They note a 'peculiar uniformity' to this language, stemming from the centralisation of political power: new forms echoed slogans disseminated by Mao and his followers.⁹⁸ In Beijing, some 475 streets were renamed to incorporate the word 'revolution', and there were more than 27 Red Sun Roads.⁹⁹ Shanghai saw a profusion of Dongfang Hong (East is Red) Streets, amongst others. This chaotic approach was considered by the Shanghai Revolutionary Committee's Transportation Group to be very 'inconvenient for production and daily life'.¹⁰⁰

Bitter power struggles were fought in every work unit, impairing the local government's ability to carry out ordinary administration. In August 1966, the Construction Bureau had drafted a report on road names in the city, on the grounds that previous rounds of changes had not been radical enough. It recommended finally purging the legacies of the reactionary government, including changing the names of 40 roads which included any of the three characters *Guo*, *Min*, or *Zheng* (identified, but unchanged, in 1958).¹⁰¹ A meeting of senior city leaders was convened in October to discuss this proposal, but it ended without a resolution.¹⁰²

In January 1967 radicals overthrew the local government in Shanghai and established the Shanghai People's Commune. It was replaced after only a month with a tri-partite Red Guard-Army-Party alliance designed to ensure that government could function. This new government, the Shanghai Revolutionary Committee, remained radical in its ambitions. In April, the Committee's Communications Group recommended to the leadership that Zhongshan Dong Yi (Zhongshan East First) Road, which was home to the colonial architecture of the Bund, be renamed Fandi (Anti-Imperialism) Street. They also suggested that Tianmu Road in Zhabei be renamed Hongweibing (Red Guard) Road because its name was a reminder of superstition (in Buddhism, Tianmu is the Heavenly Mother). However, even the Revolutionary Committee's leadership adhered to the principle that road names should be changed as little as possible. The Committee put off a decision, suggesting that the matter should be taken to the masses for discussion.¹⁰³ During 1967–1969 only thirteen roads were officially renamed in Shanghai, all of which standardised or simplified existing names. The masses took renaming into their hands in 1966, but Shanghai witnessed little officially sanctioned renaming during the Cultural Revolution as bureaucrats stuck to the principles observed in the 1949–1966 period.

There was no further official renaming until October 1980, when the city government was beginning to dismantle the commune system, necessitating minor changes. Three road names, including Huang Xing Road, that had been changed in 1964 were restored in March 1985.¹⁰⁴ A noteworthy proportion of roads in Jiangwan retain Guomindang-era names today.¹⁰⁵

Conclusion

This article has argued that Cultural Revolution-era unofficial renaming practices have shaped ideas about revolutionary change in socialist Shanghai that are not reflective of the period 1949–1966. During this time, officials often considered widescale road renaming, but scaled back their ambitions at each stage, in line with instructions from Beijing and with their pragmatic approach to urban management more generally. Renaming represented symbolic change, differentiating virtuous 'New Shanghai' from the evil old society, yet the nature and extent of renaming in the city was relatively conservative.

Road renaming was driven in large part by a desire to rationalise the city, unleashing its productive power. The ideal of improvement through modernisation was a major motivating factor in CCP governance, especially given the extremes of inequality that defined urban life before 1949. This is not to deny the destructive despotism at the heart of the Maoist project, but rather to explain that modernisation was also an important component of CCP ideology in the Mao era, a fact that is often overlooked. Finally, we should note that when renaming did take place, rather than turning the city ‘red’, the colonial-era practice of using Chinese place names was usually deployed, writing the national future over the city’s past.

The CCP’s desire to rationalise Shanghai re-emerged after the Cultural Revolution. In 1978, China was set on a new course of ‘reform and opening up’ through rapid economic development, which has driven urbanisation at a pace unprecedented in human history. In this context, technocratic governance has assumed a new importance and the management of place names captures this trend. In response to a nationwide strategy, Shanghai municipality set up a Place Names Office in July 1979, charged with restoring proper management of naming. A multi-layered infrastructure was set up to monitor names down to neighbourhood level.¹⁰⁶ The creation of this infrastructure demonstrated the importance attached by central and local government to the proper management of place names for effective governance.

This was accompanied by a concerted effort to survey and systematize road names. In April 1979, a trial census of place names was launched in Nanshi district, checking existing names, recording new ones and using the data to produce detailed city maps. In August, the Office announced the commencement of the city’s first citywide place name census. It took nineteen months to complete and identified 2,890 road names. In October 1980, 51 road names were changed in response to survey findings, mostly for routine administrative reasons.¹⁰⁷

Place name management was given even more importance as Shanghai grew in the following decades. In September 1989, a Shanghai Place Names Committee was established to coordinate a citywide place name management network across seventeen different organisations. A visit by Deng Xiaoping in 1992 spurred further reforms, and the city resumed its place as China’s

economic capital. In December that year, place name offices were set up in every city district.¹⁰⁸ A second major survey ran between February 1991 and November 1994.¹⁰⁹ In this way, place naming has brought order to naming practices in hyper-modern Shanghai, completing a project begun in the 1950s.¹¹⁰

Similar tensions regarding renaming played out in other Chinese cities in the Maoist period, but not to the same extent. The significance of renaming in Shanghai was magnified by the prominence the city was given by the CCP as a proving ground for the transformative power of socialism to do away with the legacies of the ‘semi-colonial, feudal and reactionary’ past. Future research may explore renaming in other cities, as well as the important issue of how residents experienced renaming, and whether old names bearing meaning to Shanghainese people endured in popular memory.
